

Kestrel, one-page usage rules

Use these rules to keep the identity sharp, consistent and partner-ready.

Kestrel

D&DI market scan
Strategic, fast and signal-led.

1. Core logo

- Use the primary line-art Kestrel logo as the default. It is the approved direction for this pack.
- Keep the wordmark in graphite on light backgrounds and white on dark backgrounds.
- Use the premium or modern variants only for campaign treatments, not as the default signature.

2. Colour use

- Graphite #4E4E51 is the anchor colour for text and structure.
- Violet #7766EC and electric blue #2272FF are the hero accents.
- Lavender is a support colour, not the lead brand colour. Light grey is for breathing room and panels.

3. Clear space and scale

- Keep clear space around the logo equal to at least the height of the wordmark K.
- Do not scale the masthead below 240 px wide. Use icon versions for smaller placements.
- For Outlook and Teams, use the supplied icon tiles and masthead files rather than resizing ad hoc.

4. Backgrounds

- Use transparent light assets on white or very light neutral backgrounds.
- Use dark-mode assets on graphite or dark navy-style backgrounds only.
- Do not place the logo over busy imagery, gradients or photographic textures.

5. Do not

- Do not change the approved colours.
- Do not stretch, rotate or re-stack the lock-up.
- Do not add shadows, glows, bevels or outlines.
- Do not rewrite the sub-heading. Keep it as D&DI market scan.

6. Recommended usage

- Email mastheads, briefing covers, Teams tiles, SharePoint banners, PowerPoint section dividers and internal campaign headers.
- For partner-facing material, favour the primary light or primary dark logos.
- Use the premium variant for strategic papers or leadership briefings. Use the modern variant for digital-first formats.
